

WHAT HAPPENS WHEN BRAKE PADS WEAR OUT?

Driving with worn brake pads can be dangerous. Brake pads often wear out unevenly, causing a vehicle to veer when stopping. Squeaking and/or loss of braking power are signs that they need to be replaced.

Ask for Genuine Toyota.

Only Genuine Toyota Brake Pads are designed and engineered specifically for your Toyota vehicle. For trouble-free driving, always ask for Genuine Toyota Brake Pads.

Genuine parts bring genuine value.

BRAKE PADS

BRAKE PADS enable vehicles to stop by pressing on both sides of the brake rotor, which rotates with the wheels.

With Genuine Toyota Brake Pads

Brake Lining

The lining on Genuine Toyota Brake Pads is specifically designed for Toyota vehicles, ensuring balanced, stable braking in all temperatures. Driving with non-genuine brake pads may not be as safe because they fail to provide the stable performance, reliable braking and durability that Genuine Toyota Brake Pads do.

GENUINE

GENUINE

Environmentally Friendly

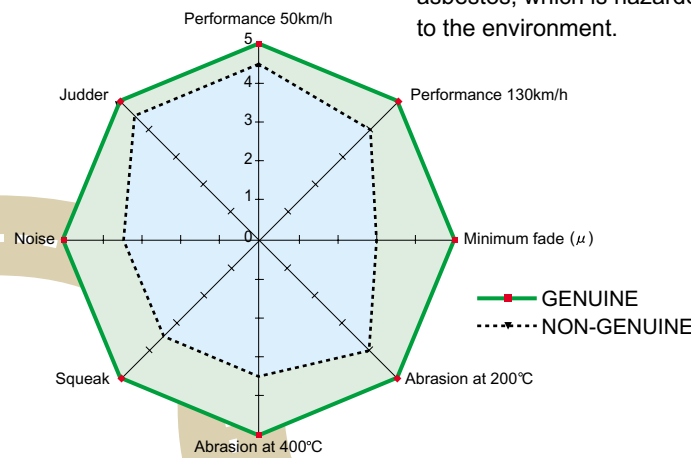

Unlike some non-genuine parts, Genuine Toyota Brake Pads are made without asbestos, which is hazardous to the environment.

Anti-skim Shim

Genuine Toyota Brake Pads have a finely processed anti-skim shim which prevents the high-frequency vibration that causes brake noise. Non-genuine brake pads do not have an anti-skim shim, making them more likely to squeak.

Fitting

During the manufacturing process, all Genuine Toyota parts undergo strict quality control inspections. Genuine Toyota Brake Pads are carefully checked for proper clearance between the brake pad and caliper to ensure smooth braking. Since many non-genuine pads are not properly inspected for proper clearance, they may squeak - or even cause brake failure.

Genuine Toyota Brake Pads are more effective than non-genuine brake pads. They don't have to be replaced as often, making them less expensive in the long run.

Without Genuine Toyota Brake Pads
